## Full Stack Developer

davidvillarr3al@gmail.com

2102742785

San Antonio, United States

## Profile

ItinerAI was a company that I have previously worked with and got to show the skills that I have learned from a coding boot camp that I have recently completed. There I was able to show that I can work well with a team and communicate well with others when it comes to achieving a goal. I had the job of creating a database with MongoDB and working with typedefs and schema to determine the information we had from users to allow certain access to the application's functionality.

## Employment History

### Backend Developer at ItinerAI

09/2024–12/2024

Developed a back-end that was able to store user information that allowed them to see history of their AI generated itineraries. I was also able to create authorization keys for each user that registers with our application.

### Frontend Developer at Rush Response Towing, San Antonio

10/2024

Developed an front-end application for Rush Response Towing so that they will be able to display who they are and how they work. This application was created to allow a user to contact a towing company for any vehicle emergency, the site allows for mobile payment through Stripe.

## Education

### Full-Stack Coding Certificate, University of Texas at San Antonio, San Antonio

05/2024–10/2024

Completed a six-month coding boot-camp through the University of Texas at San Antonio and was given a certificate of completion for meeting the requirements of the program.
